

- Monthly fees for cloud services are based on your resource usage. AWS and VMware cloud offerings for business applications start as low as \$10 per month.
- Most cloud accounts are available on a month to month basis. No long term contracts are required.
- Cloud infrastructure can implement redundancy via load balancing and auto scaling to comply with variable resource requirements. There is no need to over provision resources for occasional increases in capacity.
- Cloud backup and disaster recovery options are available to comply with recovery point (RPO) and recovery time (RTO) objectives.
- Server migration from Linux, Windows or VMware is available at no additional cost for most applications.

Please contact us via email at info@cloudium.net or phone (787) 723-5000 to discuss your cloud requirements. Our estimates of your monthly cloud costs will make a careful selection of cloud resources, focusing on efficiency and sizing them according to your requirements.
